Manual

1,Connect the data cable, turn on the clock.
Turn on your phone -> Setting -> WLAN or Wi-Fi.
Connect to this: **Smart Weather Clock**.
（If the phone pops up that this network has no Internet, it may not be safe. Please trust this network and keep linking.）

The setting page will pop up automatically.
（If the settings page does not pop up, keep your phone connected to the "Smart Weather Clock" WiFi and turn off mobile cellular data for your phone.Then enter **192.168.4.1** in the browser to open the settings page.）

2,After the page opens,click the drop-down list under WiFi Settings, select your WiFi name, enter the password, and click Connect.

3, after the clock automatically restart, open your cellphone browser, （Let the mobile phone and smart clock be linked to the same router）

enter the IP address rotated in the upper left corner ofthe clock, such as: 192.168.**. **.

4,Set the city, brightness, temperature unit and other functions.

 5,Enjoy!
